# Project Motivation: South Africa Pomolong Township

- Supply renewable energy to a small community center located in the Pomolong Township in South Africa
- Impact the lives of many by powering a essential electronics such as computer, a projector, lights, and other devices use for educational purposes

# Pomolong Township Community Center Power Needs

Item	Watts	Quantity	Est. Hours	Total Watt hours	Total Watts
Lights	15	2	5	150	30
Computer charger	65	1	5	325	65
Projector/ TV	300	1	5	1500	300
Maximum Power					395 Watts
Energy in a single day: ~2 KW-hrs					

# Goals & Objectives

- Charge a 24V battery bank safely and reliably
- Deliver necessary power to the user when demanded
- Deliver necessary energy types to the user when demanded (i.e. USB, American standard (110V), and European standard (220V))
- Overall robust and reliable energy storage system

# Design Specifications

- Input Source ~ 24V – 30V (DC)
- System Power Output ~ 2000W
  - AC Voltage: 110Vrms  
&  
220Vrms
  - DC Voltage: 5Vdc (USB port)
- 24V Battery Bank
- Utilization of wind and Solar energy sources

# Table of Contents

**1. Project Overview**

**2. Revision A/B**

**3. Final Revision**

**4. Time Line of Project**

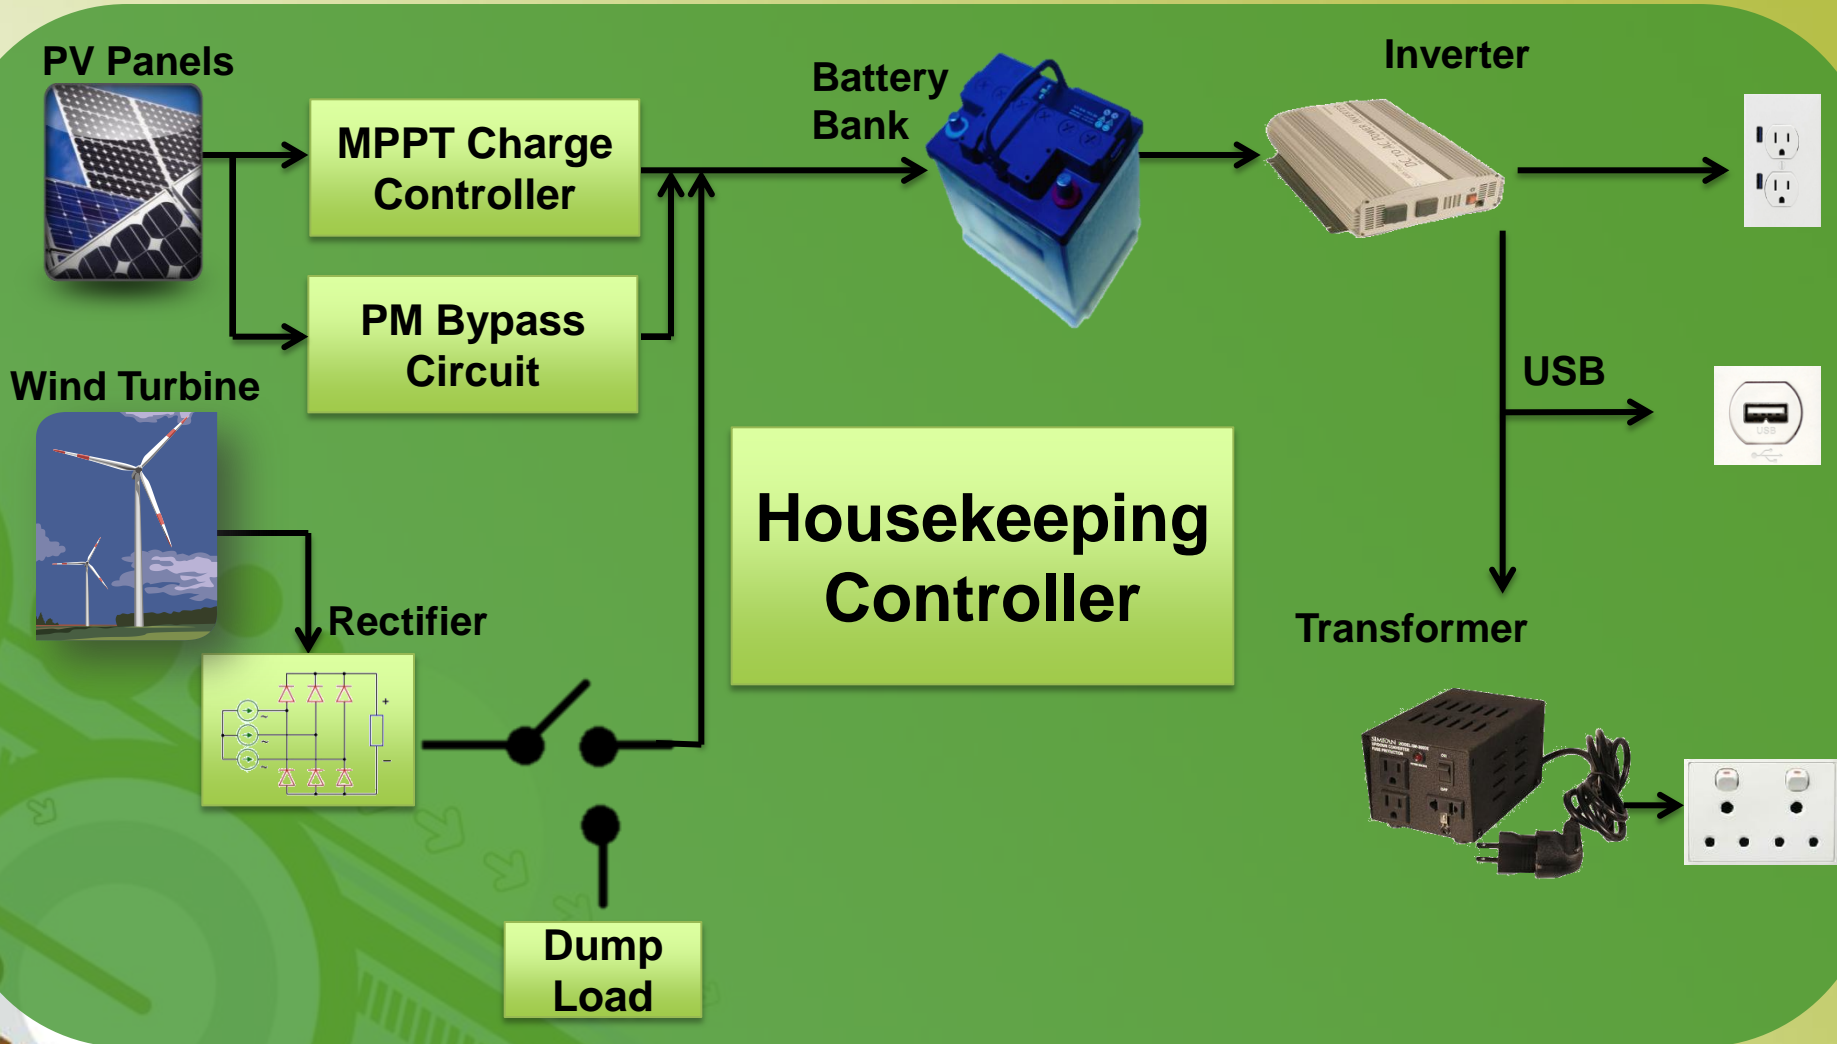

**5. Group Responsibilities**

**6. Financials**

# Components Overview

## Revision A

# Renewable Energy Sources

**Sources provided by the mechanical Engineers:**

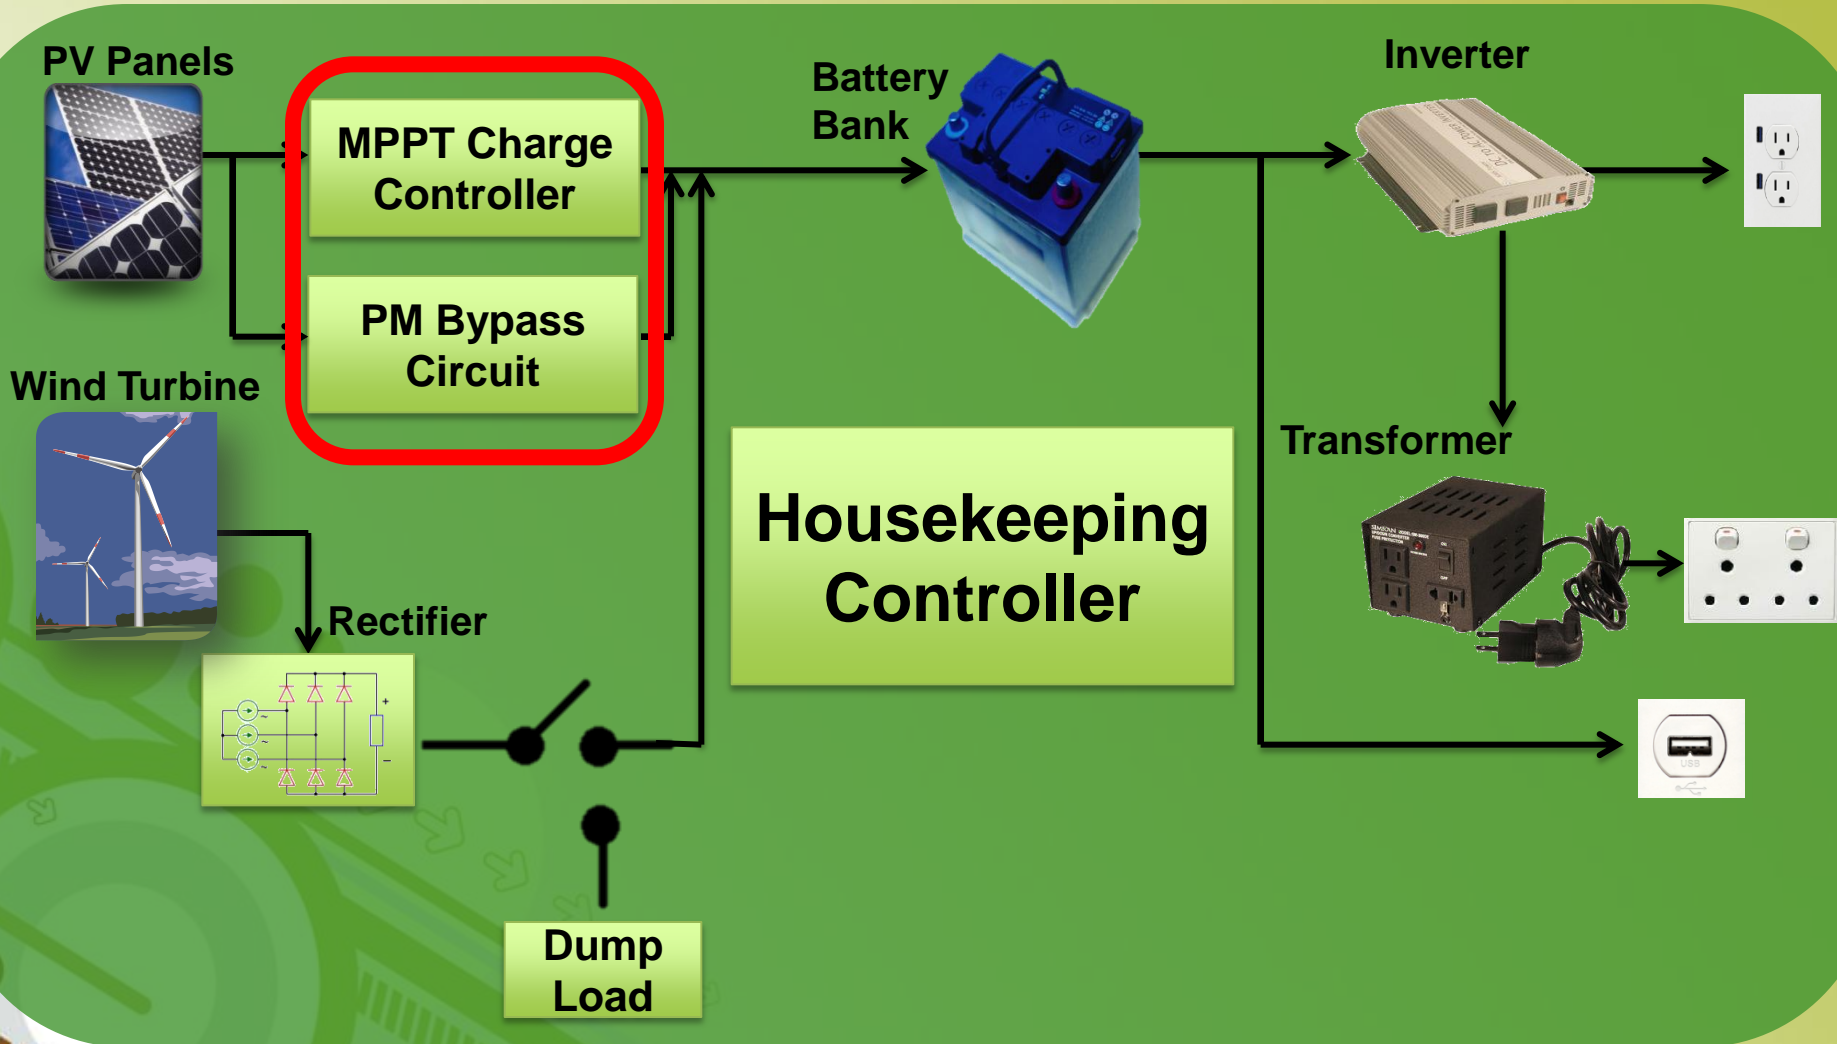

- **Solar tracking team**
- **Wind tower team**

**Lessons Learned:**

- **Communication is key**
- **Larger amount of people on a project can add more problems than solve**

# Components Overview

## Revision A

# Charge Controller

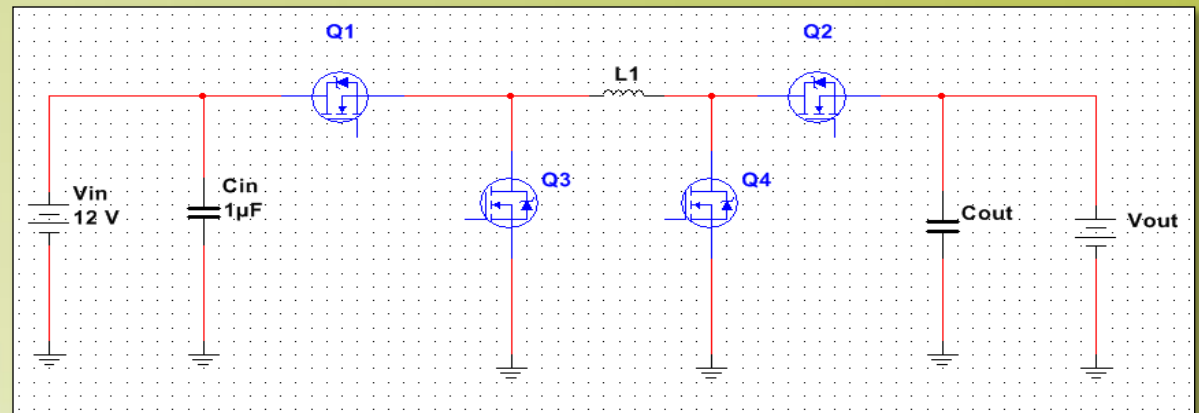

## Buck & Boost Converter

Sch has a 12V system needs to be 24V

**CSD18532KCS**

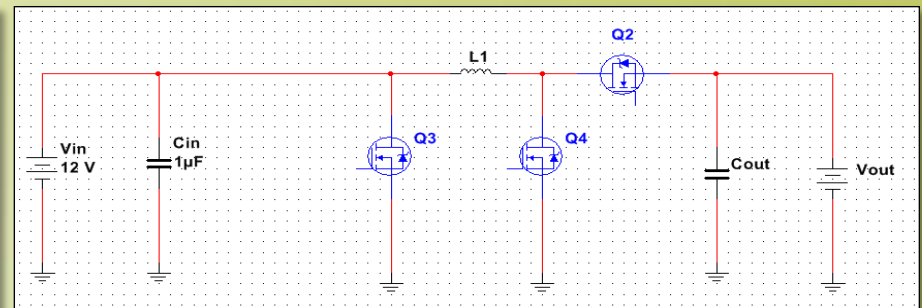

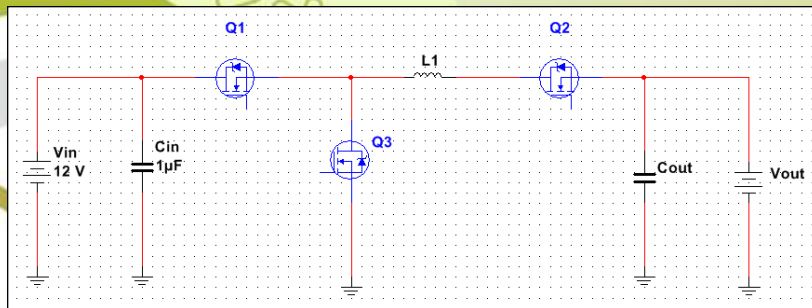

**MOSFET**

60-V, N-Channel  
Power MOSFETs

**Buck Mode**

**Boost Mode**

# Charge controller Buck & Boost Converter

## Lessons Learned:

- Modes of a MOSFET
  - Cutoff  $V_{GS} < V_{th}$
  - Linear Region  $V_{GS} > V_{th}$  and  $V_{DS} < V_{GS} - V_{th}$
  - Saturation  $V_{GS} > V_{th}$  and  $V_{DS} \geq V_{GS} - V_{th}$
- Ringing in MOSFET
  - High Frequency
  - Low Current
- Robust and Forgiving

# Charge Controller

## H- Bridge Driver: SM72295

Parameter	SM72295
Switching frequency	220kHz
Analog Supply Voltage	10 V
Digital Supply Voltage	5 V
Peak Output Current	3 A
Operating Temperature	-40°C to 125°C
Other Features	Current Sense Amplifiers

### Lessons Learned:

- Limited ability to sink current  
i.e. lower the external gate resistor value

# Charge Controller

SM72442

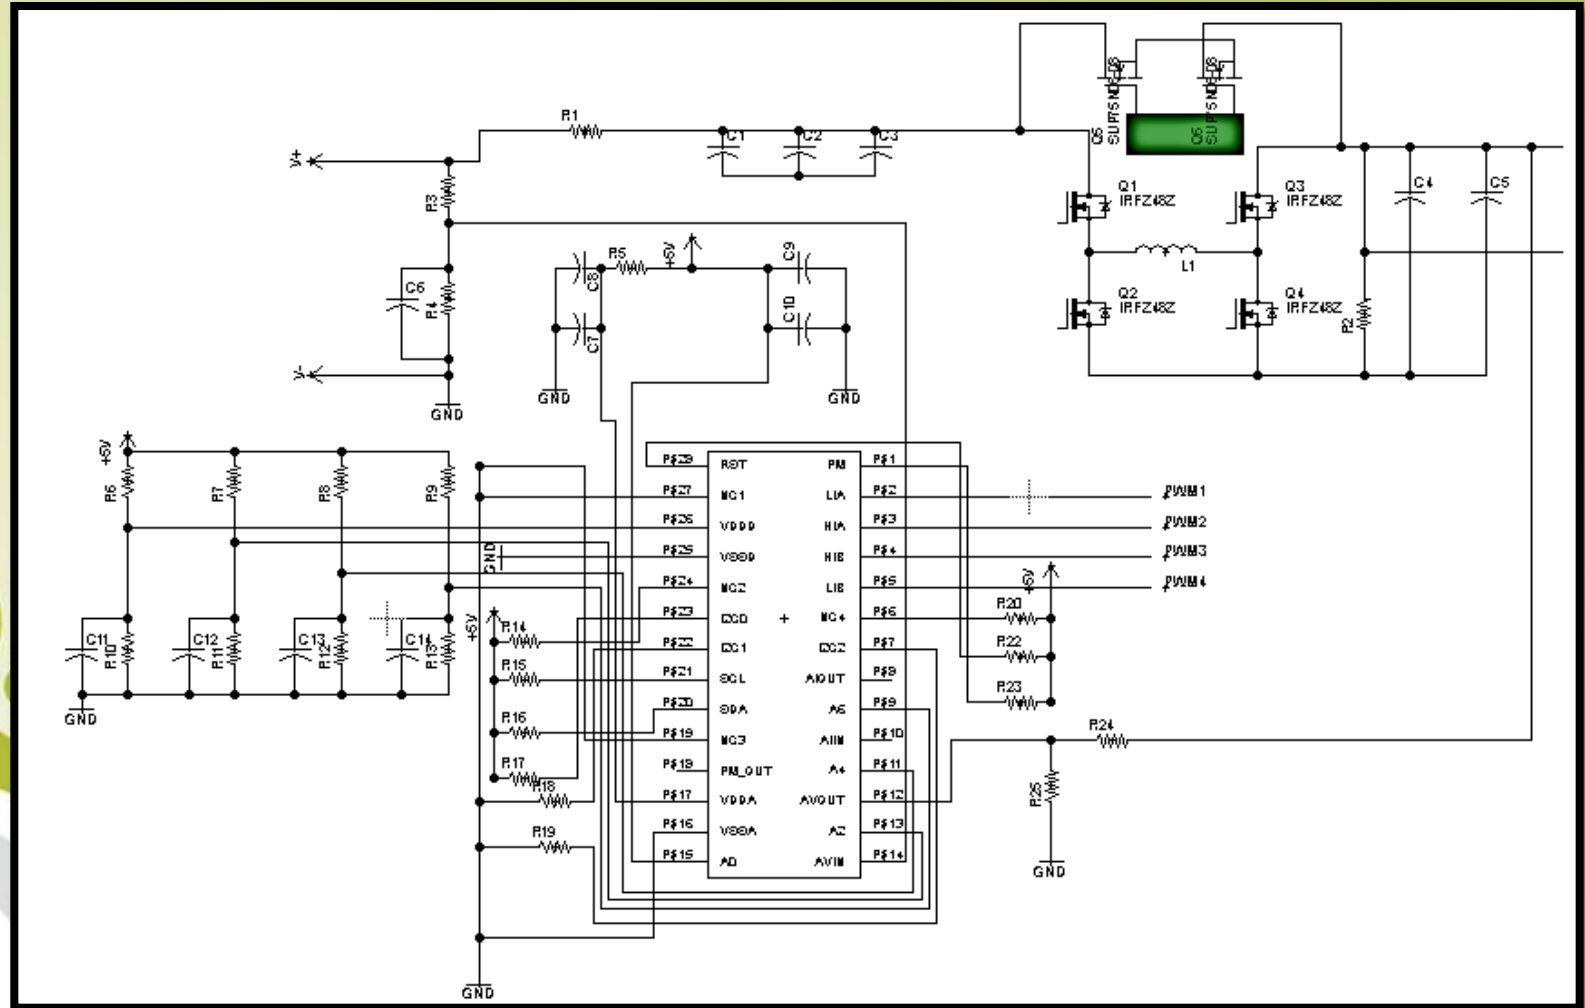

Parameter	SM72442
Analog Supply Voltage	-.3V to 6V
Digital Supply Voltage	-.3 to 6V max
Input Current at any pin	10mA
Package Input Current	20mA
Operating Temperature	-40°C to 105°C

## Lessons Learned:

- Sensitive to electrostatic shock and/or any other voltage than the required 5V
- I2C communication (for this device) requires recurring start bit not stop bit then start bit

# Components Overview

## Final Revision

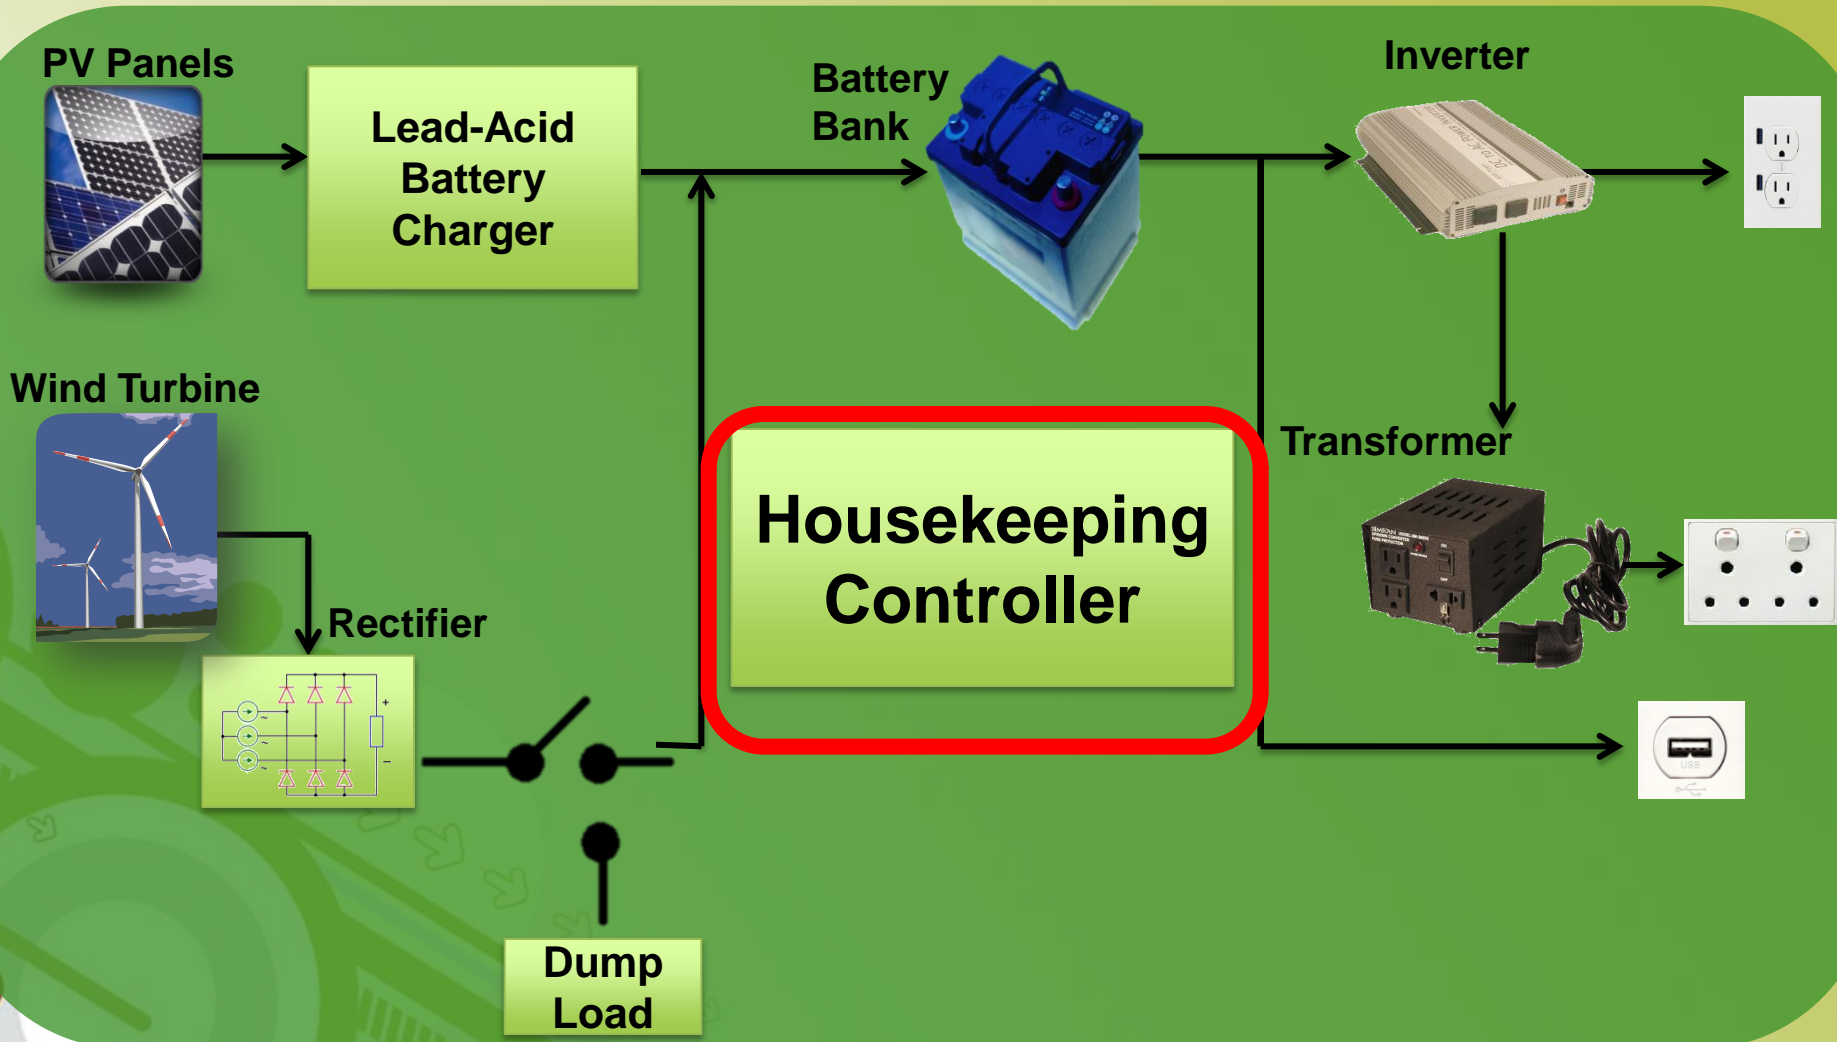

# Lead-Acid Battery Charger

## UC3906

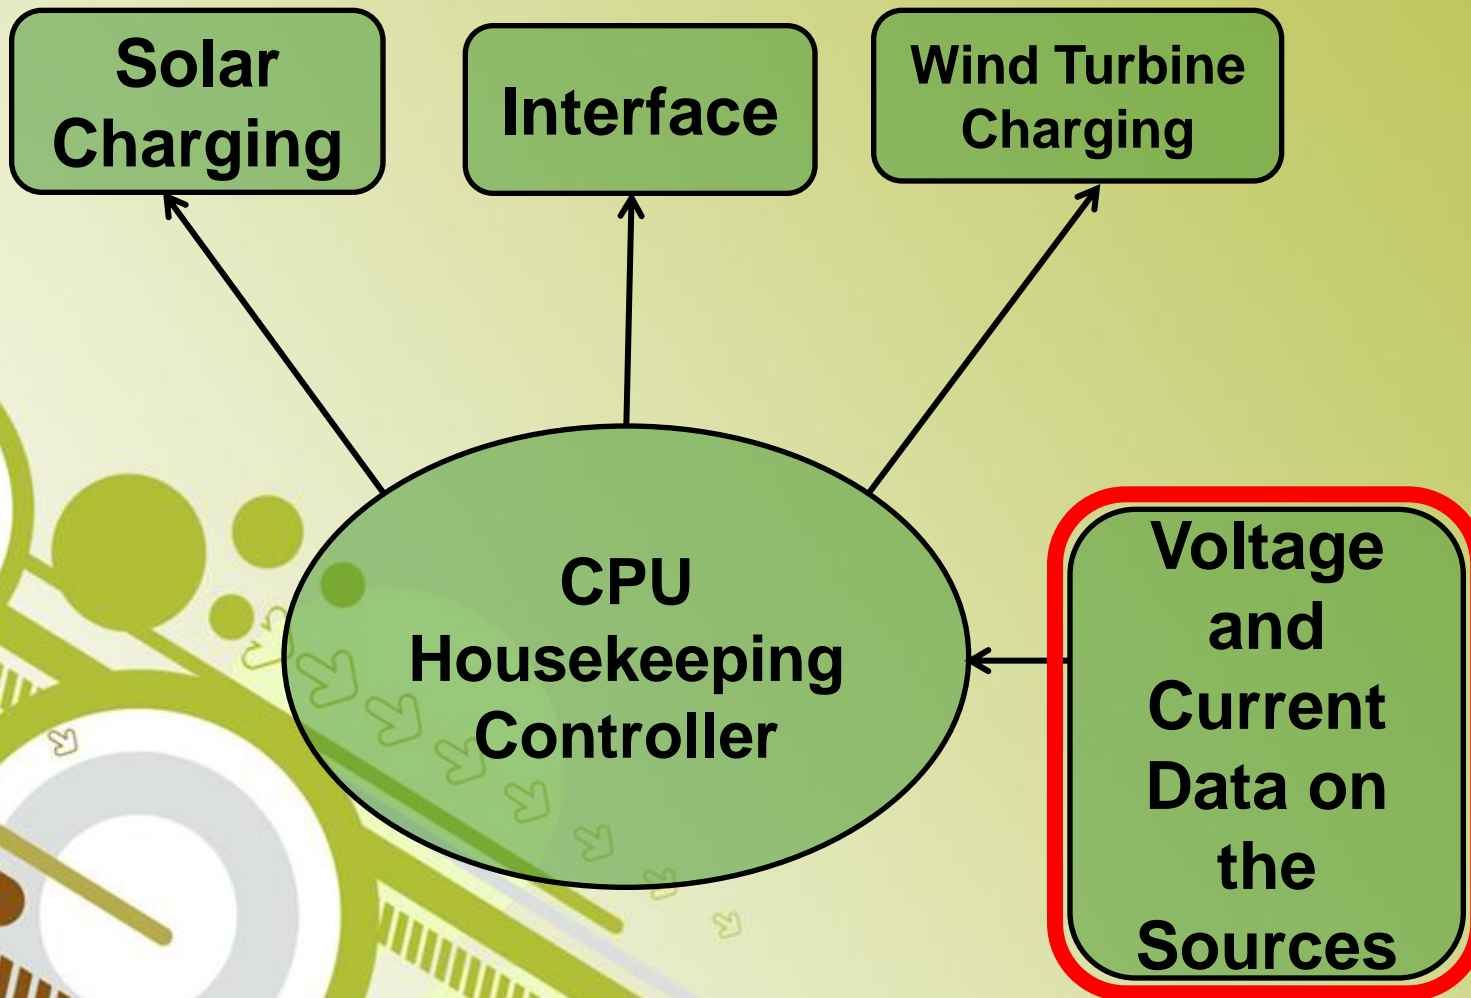

Parameter	UC3906
Input Voltage	<40 Volts
Charging stages	Bulk Absorption Float
Maximum Current to battery	15 Amps
Package	Dip Pin
Power Consumption	16mW – 33 mW

# Housekeeping Controller

# Housekeeping Controller Overview

# Data Collection

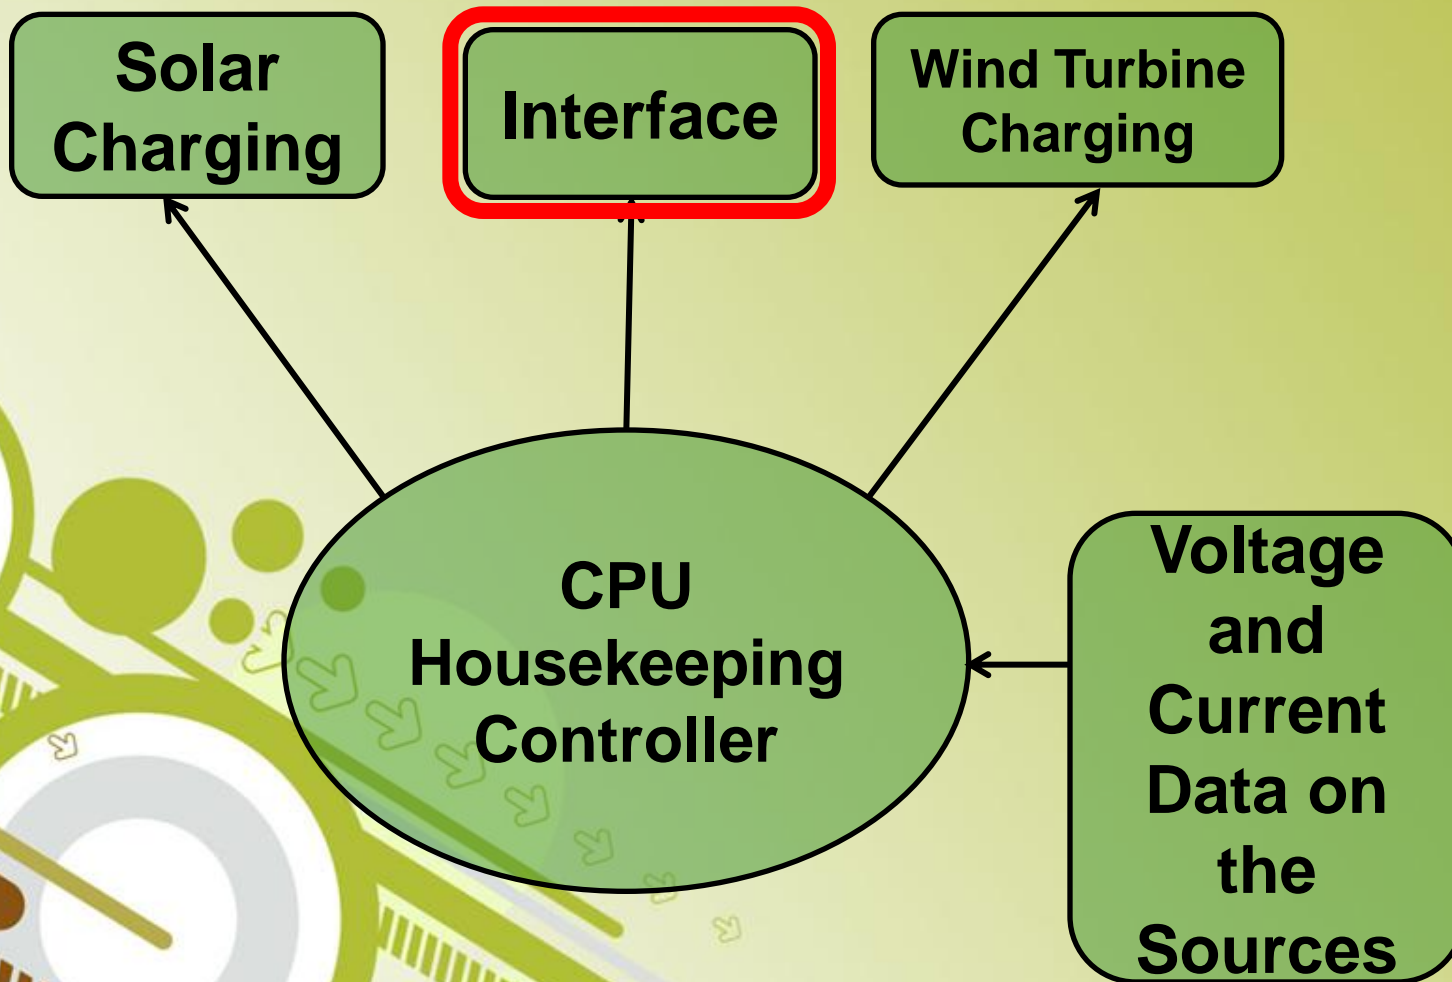

## ADS7830

Parameter	ADS7830
package	TSSOP 16
A/D Pins	8 single-ended 4 differential
A/D conversion	8-bit 70-kSPS Internal/external reference
Communication Protocols	*I2C
Voltage Supply	2.7V – 5V
Power Consumption	180 $\mu$ W (Standard Mode)

# Housekeeping Controller

# Housekeeping Controller

LCD Screen: LCD-09395

Parameter	16x2 LCD
Communication	*I2C
Operating Voltage	5V
Operating Current	60mA
Power Consumption	~ 300mW
Cost	\$10

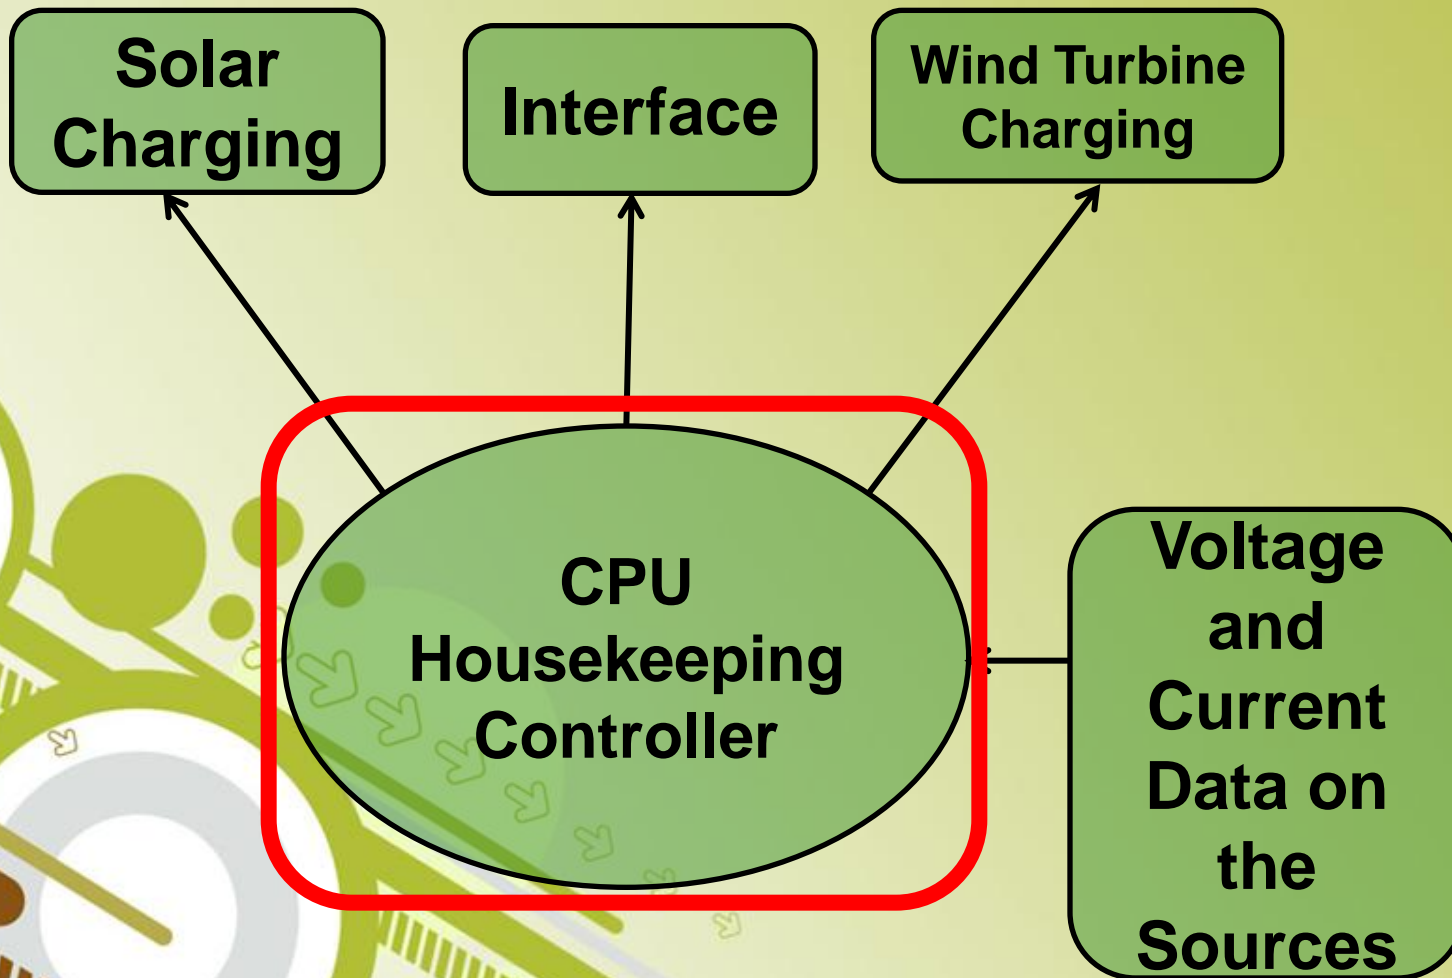

# Housekeeping Controller

## I2C 3.3V to 5V Voltage Leveler

Parameter	TCA9406
Operating Voltage	Vcca:1.6 V-3.6 V Vccb:2.3 V-5.5 V
Level Translation Range	3.3 V to 5 V
Communication	I2C (For LCD screen)

# Housekeeping Controller

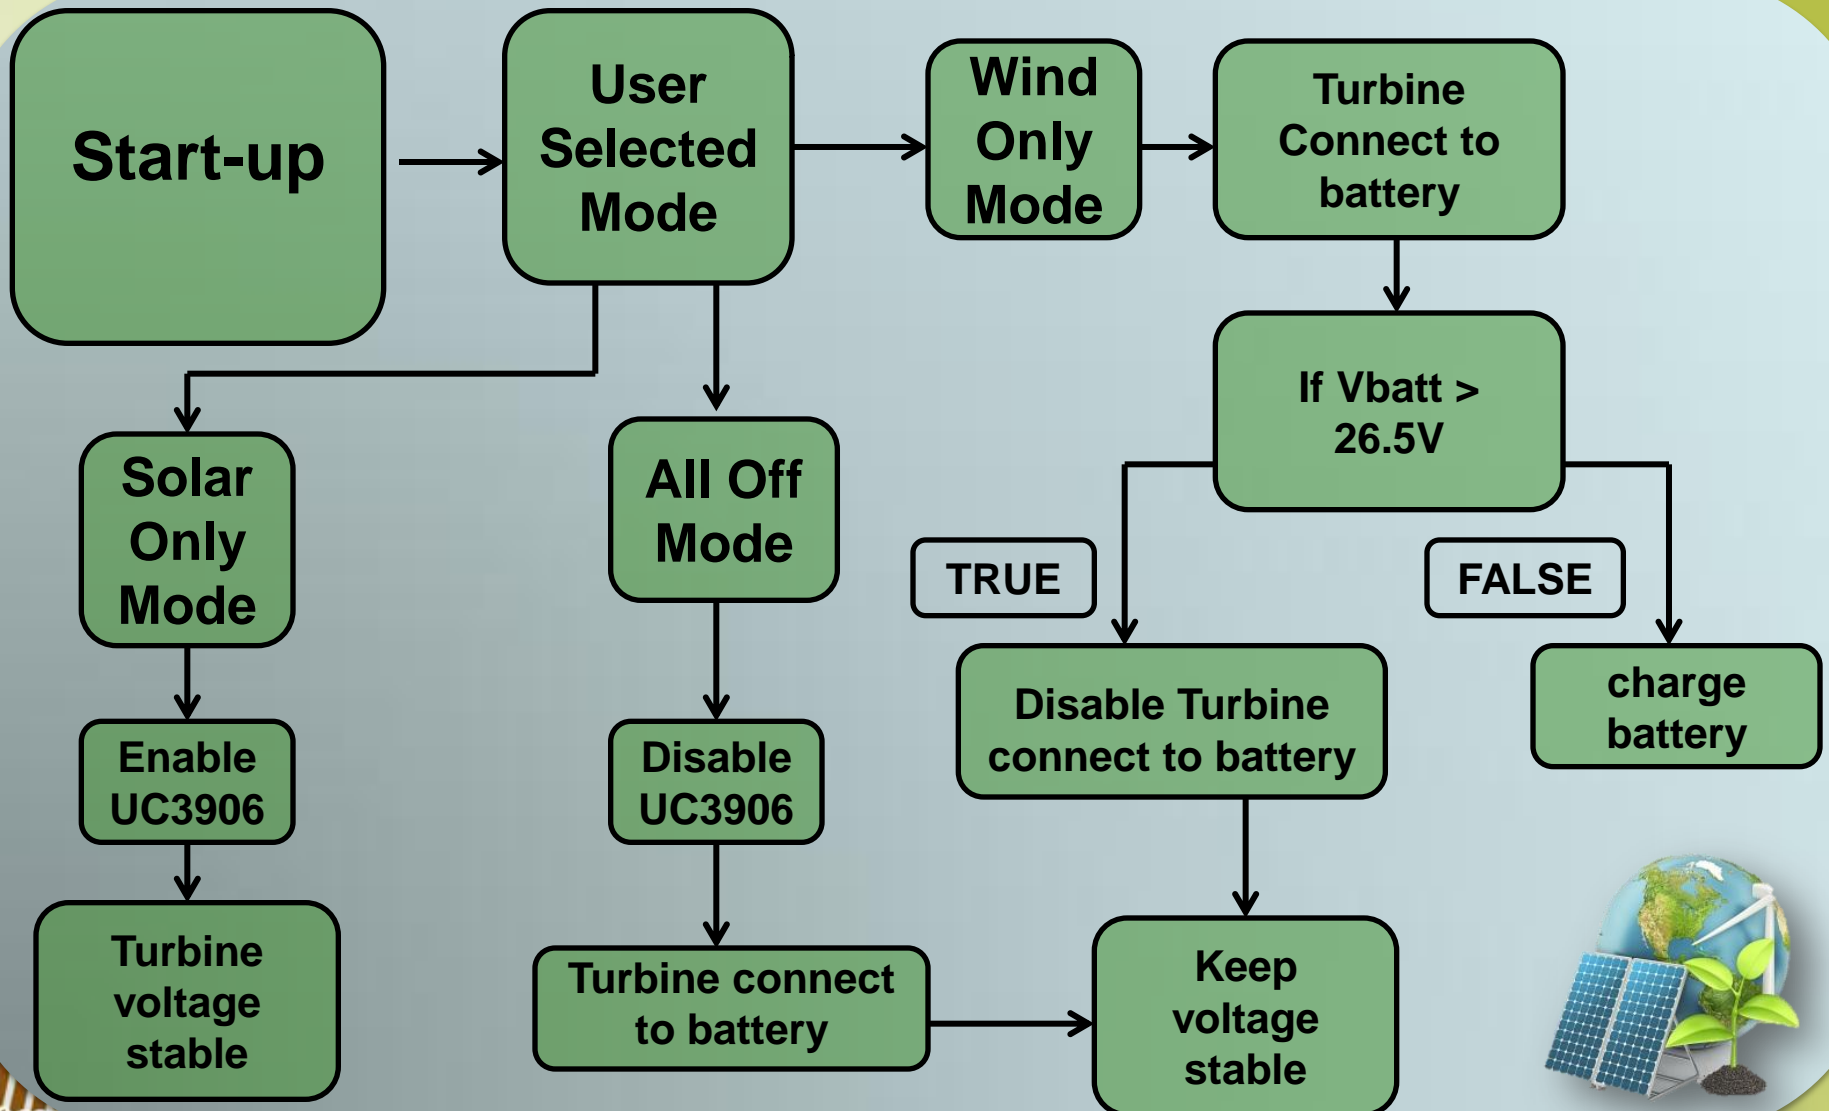

# Housekeeping Controller

## MSP430G2553

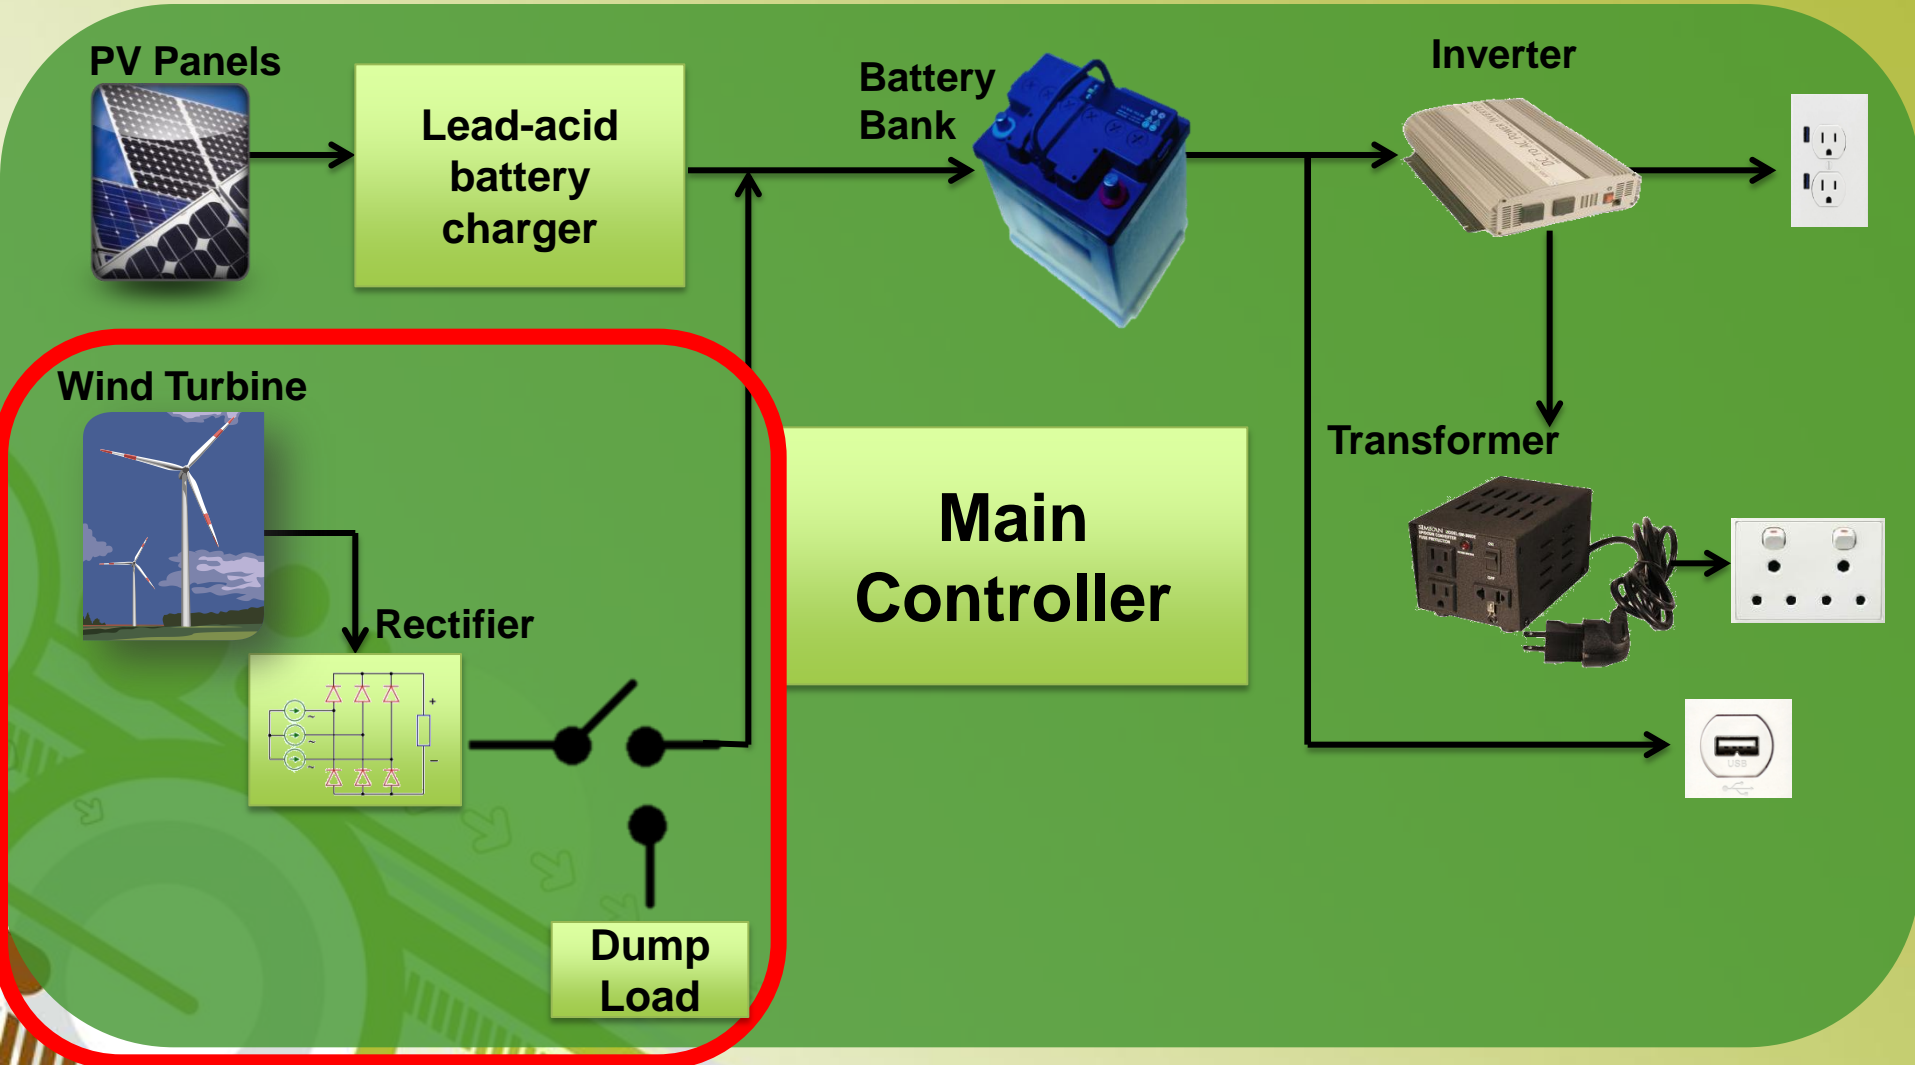

Parameter	MSP430 LaunchPad
Chip	MSP430G2553
I/O Pins	20 pins: P1.0-P1.7 P2.0-P2.5
Analog to Digital Conversion Pins	10-bit 200-kSPS
Communication Protocols	*I2C *SPI *UART
Voltage Supply	1.8V – 3.3V
Power Consumption	< 1mW

**1<sup>st</sup> Stage: Bulk**

**2<sup>nd</sup> Stage: Absorption**

**3<sup>rd</sup> Stage: Float**

# Load Distribution

# Output Component

Inverter Design: Aims PWRINV2.5K24 2500 Watt

Parameter	AIMS
Max. Power	2.5kW
Surge Power	5kW
Wave Output	Modify Sine Wave
Operating Input VDC	20-30 Volts
Full Load Efficiency	90%
Operating Temperature	-15°C to 55°C
Weight	14 lbs
Cost	\$280

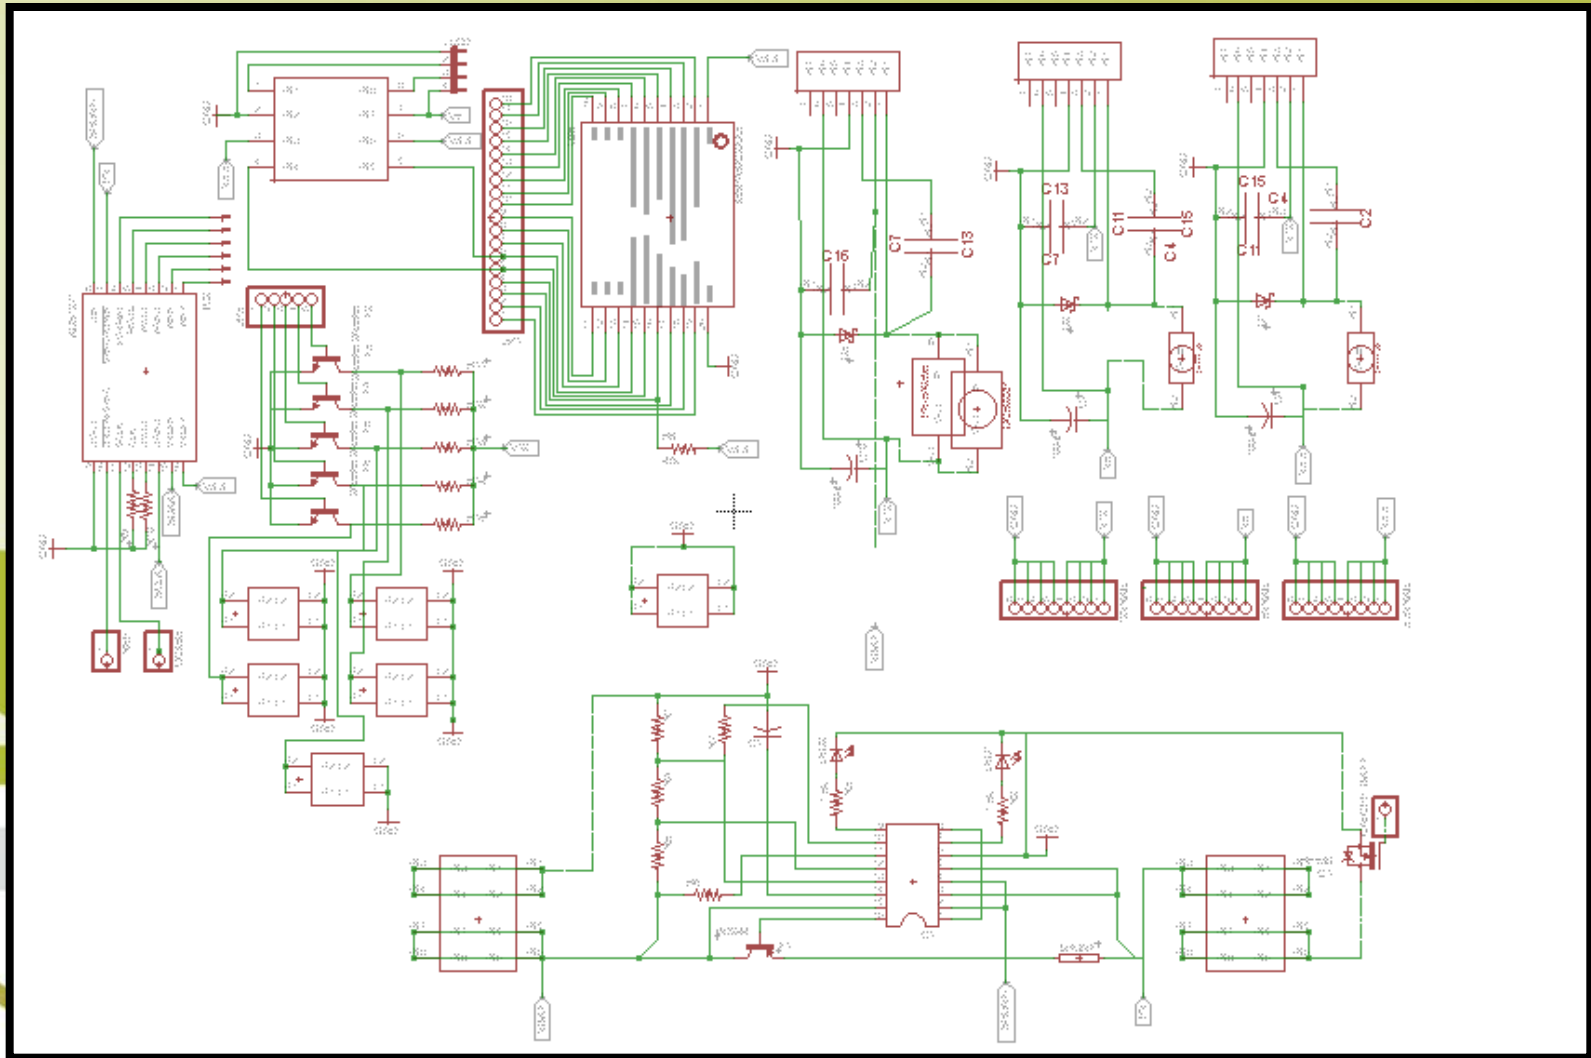

# Output Components

## AC-AC Transformer: SevenStar THG-1000

Parameter	Dual Step Voltage Transformer
Outlet	3 American Or 2 European
Voltage Conversion	110V to 220V 220V to 110V
Max. Power output	1000Watts
Weight	17 lbs

# Time Line of Project

**January**

**February**

**March**

**April**

Jan 15<sup>th</sup> - January 31<sup>st</sup>

- Purchase IC devices
- Design circuit
- Keep research microcontroller

Feb 1<sup>st</sup>-February 15<sup>th</sup>

- Prototype design

February 22<sup>nd</sup>

- CDR Presentation

Feb 23<sup>rd</sup> – March 1<sup>st</sup>

- I2C code ready
- Purchase components

March 2<sup>nd</sup>–March 10<sup>th</sup>

- SPRING BREAK

March 11<sup>th</sup> –March 30<sup>th</sup>

- Communication integrate circuits troubleshooting
- Purchase PCBs
- Failed communicating

April 1<sup>st</sup>– April 9<sup>th</sup>

- Design prototype revision C
- Test prototype
- Purchase PCB
- Successfully communicating
