UNIVERSITY OF CENTRAL FLORIDA

Vacuum Tube Stereo Amplifier with Digital Control

Senior Design Project – Spring / Summer 2013

Group 4

Rafael Enriquez, Jason Lambert, Stephen Nichols

4/25/2013

Rev 2: 7/11/2013

This document describes a vacuum tube power amplifier with full analog signal processing, and a microcontroller providing digital control of all signal parameters.

Table of contents

1: Executive Summary 1
2: Project Description 1
2.1: Motivation 1
2.2: Design goals 2
2.3: Project Requirements and Specifications 3
2.3.1: Hardware 4
2.3.2: Software 6
3: Research Related to Project Definition 9
3.1: Existing Similar Projects and Products 9
3.2: Senior Design Projects from Prior Years/Other Schools 10
3.2.1: Low-Cost Audio Power Amplifier Final Design Report 10
3.2.2: 10-Band Graphic Equalizer 10
3.3: Modern Commercial Vacuum Tube Amplifiers 11
3.4: Component Research 13
3.4.1: Vacuum Tubes 14
3.4.2: Display Unit 15
3.4.2.1: 6.2" TIANMA TM062RDH03 60 pin LCD Screen Panel Module Controller +Touch Screen 16
3.4.2.2: 7" inch TFT 800*480 LCD Display Module 16M colors Touch Panel Screen SSD1963 51 17
3.4.2.3: Display Unit Final Decision 17
3.4.3: Embedded Processor 20
3.4.3.1: Atmega2560 21
3.4.3.2: Stellaris LM4F120H5QR 22
3.4.3.3: MSP430 22
3.4.3.4: STM32F303VCT6 23
3.4.3.5: Embedded Processor final decision 24
3.5: Operational Amplifier 24
3.6: Analog Multiplexer 24
3.7: Digital Potentiometer 25
3.8: Serial Communication Bus 27
3.9: Optocoupler 29
3.10: Cabinet Materials 29
3.11: Critical Components 30
3.12: Possible Architecture 30
3.12.1: Vacuum Tube Preamplifier / Amplifier 30
3.12.2: Top Level Interconnect Diagram 33
3.12.3: Audio Processor Diagram 34
4: Project Hardware and Software Design Details 35
4.1: Software Block Diagram 35
4.2: Physical Construction 36

4.3: Input Source Select 36
4.4: Audio Processor 38
4.5: Vacuum Tube Audio Preamplifier 46
4.6: Vacuum Tube Power Amplifier 46
4.7: Touch Screen 48
4.8: Microcontroller 49
4.8.1: STM32F303VCT6 50
4.8.2: Required Hardware Support 50
4.8.3: Programming Methods 51
4.8.4: STM32F3Discovery 53
4.9: Color LCD Display 54
4.10: Power Supply 57
4.10.1: Low Voltage 57
4.10.2: High Voltage 61
4.11: Power ON Sequencer 62
4.12: Graphic User Interface (GUI) 63
4.12.1: Requirements 64
4.12.2: System Design 67
4.12.3: Test Plan 69
4.13: Digital Equalizer (SPI) 70
4.14: Analog to Digital Converter (ADC / Fourier Transform) 71
4.14.1: Analog to Digital Converter (ADC) 74
5: Design Summary of Hardware and Software 75
5.1: Project Prototype Construction and Details 75
5.2: Project Prototype Testing 75
5.3: Hardware Test Environment 76
5.4: Microcontroller Testing 76
5.5: Host Computer Debugging Interface 77
5.6: High Voltage Power Supply CCA Test 77
5.7: Audio Processor CCA Test (without digital control) 79
5.8: Microprocessor / LCD Tests..... 84
5.9: To Be Performed at Least Once After Final Assembly is Complete 85
6: Administrative Content 85
6.1: Project Milestones 85
6.2: Budget vs. Actual Cost 85
6.3: Bill of Materials 85
6.4: Software Used 90
7: Appendix 90
8: References 93
